Dynamic Content	<p>It is always better to structure your content wherever possible, to standardize content management, and cut down on manual labour. Dynamic content is a way to do this at will from within the system without the need of a developer or creating a new version of the site to pass through the entire process of approval and deployment.</p> <p>Using this functionality allows you to have a structured centralized location for managing any dynamic content.</p> <p>A supplementary functionality is the ability to create view templates for any widget within the system. The advantage of this functionality is again that the entire process can happen from within the system and without the need for redeployment. Both Dynamic content and Dynamic views are objects that can be synced between different instances of the site using the synchronization capabilities of the platform.</p>
Shared Content	<p>SiteTriks provided a tool out of the box to create a sharable HTML blocks. These blocks can be placed an pages as content blocks or as components within content of a specific item. This system provides flexibility and is tied in with the provided HTML Editor within the CMS.</p>
Multilingual	<p>SiteTriks has been built with the goal to allow users to localize their content with ease and flexibility. Out of the box, SiteTriks support full multilingual functionality for page and news content. Pages have separate content, layout, revision history and version management for each language.</p> <p>New languages can be added with customizable URL prefix, with just a few clicks from the backend of the site. The CMS tracks for the validity of crucial multilingual content and provides visible alerts for all content editors.</p>
Search and Tagging	<p>Through a combination of Sitemap generation and Custom Google Search, SiteTriks supports full content search throughout the entire websites' content. Additionally, a tag system is introduced for all objects in the backend and frontend of the site to allow for a simple process for building custom search solutions.</p>
Automated Sitemap	<p>Having a sitemap is important for any site to facilitate the greatest visibility across search engines. It is important not only to have one but have one that is currently updated. SiteTriks has an out of the box implementation to automatically generate sitemaps for pages, news, and files and submit them for evaluation.</p> <p>SiteTriks has an out of the box tool to transfer a variety of contents from a Sitefinity website. The content that could be easily transferred include: Pages, Images, Documents, Videos. The tools consist of two parts, an exporter that needs to be added to a Sitefinity project and automated import that will use the exporter added to the Sitefinity project. The tool requires no configuration, but simply the URL of the Sitefinity instance directly to Google. Sitemap updates can be scheduled or ran at will, or any combination of the two.</p>
Import from Sitefinity	<p>SiteTriks has an out of the box tool to transfer a variety of contents from a Sitefinity website. The contents that are handled automatically include: Pages, Images, Documents, Videos. The tool works along side code placed on a Sitefinity instance that is accessible over the network. The export tool constantly is expanded and new export capabilities are added continuously The tools consist of two parts, an exporter that needs to be added to a Sitefinity project and automated import that will use the exporter added to the Sitefinity project. The tool requires no configuration, but simply the URL of the Sitefinity instance.SiteTriks has an out of the box tool to transfer a variety of contents from a Sitefinity website. The content that is handled automatically includes: Pages, Images, Documents, Videos. The tool works along side code placed on a Sitefinity instance that is accessible over the network. The export tool constantly is expanded and new export capabilities are added continuously</p>
Modular Design	<p>SiteTriks has been built with the idea of a modular design. This philosophy was followed in the development of the product, and the system provides an easy way to keep all future development under the same philosophy. A module in SiteTriks represent a self-contained functionality with models for the database objects, the controlling and service layers, and allows for the inclusion of view layer within the module. Modules can be distributed in a variety of ways, either as NuGet packages, project libraries, or module exports. The module export approach allows for access to installing or uninstalling imported modules at will.</p>
Drag and Drop functionality	<p>For a better and simpler user experience, SiteTriks' backend makes use of drag and drop functionalities and visual aids.</p> <p>Where ever possible configurations of widgets, dashboards, and layout are preformed without the need for text input.</p>
Multi Environment Sync	<p>The Multi-environment sync in SiteTriks allows the users to synchronize changes between 2 or more environments either granularly or making a complete clone of one environment on another server instance.</p> <p>The Free and business license tier allow syncing between 2 instances, whereas the enterprise tier is extended to as many instances as the client requires. In contrast to other content management systems, the multi-environment sync could be set up to operate in any direction and is not constraint by previous sync setups. e.g. you can sync as easy from staging to production as from production to staging. Syncing supports not only transfer of content between different instances of the same site but also syncing configurations and settings as well.</p> <p>Multi-Environment sync is the tool for a clean, structured and secure work process when building and editing websites.</p>
Version Control	<p>SiteTriks' version control allows the users to revert the changes they have done and restore previous versions of a given page. The version history is tracked by different criteria to allow as much content to be preserved and be available for reuse with just a few clicks.</p> <p>There are sperate versions for different languages, draft versions of a page and public version of a page.</p> <p><b>Basic Tier:</b> 1 previous version of each page.  <b>Business Tier:</b> 3 previous versions of each page.  <b>Enterprise Tier:</b> Users can set the number of previous versions that should be stored by the system.</p>
Load Balancing	<p>Optimize resource use, maximize throughput, minimize response time, and avoid overload of the hosting server</p> <p><b>Basic &amp; Business Tier:</b> Application Load Balancing out of the box  <b>Enterprise Tier:</b> Application and Database Load Balancy out of the box</p>
Mobile Data Platform	<p>Provides functionality to create an API for the CMS allowing for the creation of mobile data platform or micro-services without the need of development.</p> <p><b>Business Tier:</b> Basic API functionality that supports CRUD Operations.  <b>Enterprise Tier:</b> Out of the box authorization functionality and additional control and configuration of queries.</p>
(GA) Analytics Integration	<p>Dashboard widget that allows integration of basic Google Analytics Information with minimum configuration.</p> <p><b>Business Tier:</b> Integration with different views of Google analytics  <b>Enterprise Tier:</b> Advanced graphical representations of GA data.</p>
Personalisation	<p>The personalization functionality allows the content managers to tailor the content that is served to the website's visitors. Currently, the personalization feature filters either by role or by user group for every available widget in the system and an easy implementation of custom widgets to support the same functionality. * Personalization is not available for the Free Tier. * The Business Tier can filter only by user role.</p> <p><b>Business Tier:</b> Personalization by User Roles  <b>Enterprise Tier:</b> Personalization by User Roels and User Groups</p>
Emailing Lists	<p>Ability to create user groups, that can be used as emailing lists or personalization for higher license tiers.</p> <p><b>Business Tier:</b> Emails could be sent to specific groups.  <b>Enterprise Tier:</b> Emails could be sent to either specific groups or to users with specific roles.</p>
Multisite	<p>SiteTriks supports hosting multiple sites from the same application and database. This allows for sharing project resources between on websites in the system while keeping content separate and combining it with the dynamic view functionality allow for easy separation of feel and looks of the sites.</p> <p><b>Business Tier:</b> Up to 2 production domains.  <b>Enterprise Tier:</b> No limitations</p>
E-commerce	<p>Out of the box module that provides the tools to create a simple online store allowing you to track the placed orders and payment procedures. Users are also able to track their own orders. Includes a out of the box payment integrations, analytics, reporting and further customization functionality. There is an API that allows simple integrating of different payment methods.</p> <p><b>Business Tier:</b> Provides out of the box basic payment integrations.  <b>Enterprise Tier:</b> Advanced E-commerce services, such as: Store skins, multiple out of the box payment options, variety of currencies, languages, advanced filtering, ratings, smart suggestions, tracking and analytics.</p>
